**Subject:** Broadband future

Dear Sir,

I would like to see a future proofed roll out of a next generation network, it would make sense to have fiber to the home where possible, this would allow us to have much faster broadband, I am sick of slow internet and poor download limits. I would also be worried if the current situation of a monopoly trying it's best to get the highest price out of the situation, meaning we the consumer pay too much.

Please listen to all those of us that voted you guys in, one of the reason I voted was for a change, lets get a FTTP network built, and please make sure that the company that runs the network does not have a conflict of interest with a retail side.

Regards,

Phil
